COMPREHENSIVE OIL AND GAS MACHINING SOLUTIONS

At Conroe Machine, we pride ourselves on manufacturing high-performance products that our energy customers can count on in even the harshest high-pressure, high-temperature, or corrosive environments. From drilling all the way to refining, our prototype and production machined parts meet some of the most stringent quality specifications in the industry—our team is API Q1, API 7-1, and ISO 9001 certified.

Upstream

We machine parts for mud motors, PDC drillbits, RSS steering heads, frac stacks, and small drillstring components to your precise specifications—with sizes as small as 1 inch. For customers that operate a rental fleet, we recut, rework, and cold roll connections, and our team is certified to cut API connections. We also offer hardfacing services for downhole drilling tools for superior wear resistance and longer lifetimes for your parts.

Midstream

For compressor stations or gathering, treatment, or storage facilities, seal integrity and assurance is crucial. We manufacture durable, reliable ball valves, gate valves, and other valve types for a number of midstream applications, from glycol pump dehydration to level control, blow-down, and emergency shutdown.

Downstream

For refineries, high-quality, precision-machined valves with gas-tight seals improve plant reliability, reduce downtime, and ensure staff safety. Whether you're looking for a control valve or switching valve, our team of expert machinists can manufacture a stock or custom valve for any refinery application in a range of materials including Inconel, Monel, aluminum, and more.

About Us

Conroe Machine has been providing energy producers with high-quality parts for over 20 years. We complete everything from one-off to bulk orders, with round-the-clock service and delivery for customers across the U.S. We pride ourselves on doing whatever it takes to meet your needs of both speed and quality, and can provide specialized manufacturing for assets that require multiple unique facets to achieve the end product your company desires.
